Abstract

A human being is a part of the whole called by us universe, a part limited in time and space. He experiences himself, his thoughts and feeling as something separated from the rest, a kind of optical delusion of his consciousness. This delusion is a kind of prison for us, restricting us to our personal desires and to affection for a few persons nearest to us. Our task must be to free ourselves from this prison by widening our circle of compassion to embrace all living creatures and the whole of nature in its beauty. (By Einstein)

1 Introduction

Some introduction goes here ...

1.1 Informal introduction of the research problem with use cases (why it is important, limitations of current solutions, your idea for improving the solution quality)

Some informal introduction goes here ...

1.2 Problem Statement (half page summary of research problem with its scope and objectives)

Some problem statement goes here ...

1.3 Solution methodology

Some methodology description goes here ...

1.4 Expected Contributions

Some expected contribution goes here ...

2 Literature Survey

2.1 Minimum summary of all existing work supporting your research

Some literature summary goes here ... Here is some cool reference ([Goodfellow et al., 2016](#))

3 Problem Solution Design

Some solution goes here ...

3.1 How to add a figure

In markdown, this `![Pace University Logo](assets/mylogo.png)` will generate the following:

Figure 1: Pace University Logo

3.2 How to add a table

In markdown, this

```
| a | b | c |
|:-:|:-:|:-:|
| 1 | 2 | 3 |
| 4 | 5 | 6 |
```

Table: Example table

will generate the following table:

Table 1: Example table

| a | b | c |
|---|---|---|
| 1 | 2 | 3 |
| 4 | 5 | 6 |

3.3 How to cite

It is possible to use Markdown/Pandoc style to cite any reference e.g. book, journal paper, conference ... etc. Just make sure to add the reference's BibTex index to `assets/myref.bib` file, then call its header as follows: `[@altowayan2016word]`. LaTeX format is possible as well e.g. `\cite{altowayan2016word} [^footnote]`

After compiling the final document it will generate this linked reference ([Altowayan and Tao, 2016](#))

3.4 How to change specific format

To change the layout or format of any component in the pdf document e.g. tables layout or figures position ... etc, one will need to edit the LaTeX template file `assets/default.latex` to add and/or modify the desired output.

3.5 How to add a footnote

To add a footnote just use markdown flavored format. Here is an example:

Google¹ is an awesome website for learning just about anything.

In raw markdown, the above is written as follows:

Google[^mynote] is an awesome website for learning just about anything.

[^mynote]: Google: https://google.com

Fixed footers:

To change the template's footers, look inside `assets/default.latex` file for `\lfoot{}` and `\rfoot{}` commands. Add or change the needed footer contents inside either command. For example, to make the date appear at the bottom left: `\lfoot{\date{$date$}}`

¹Google: <https://google.com>

4 Solution Continues

4.1 Implementation Highlights (may include process to adapt your solution for similar problems – key for reusable knowledge)

More solution goes here ...

5 Experimental Validation

Some validation goes here ...

6 Conclusion

Some conclusion goes here ...

6.1 Contributions

Some contribution goes here ...

6.2 Future Work

Some future work goes here ...
